The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-15 and 18-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eidsmore et al '546, of record, in view of Ohmi et al '871.

Eidsmore et al show a gas stick system with substrates 40 having transverse channels 41 which take manifolds, or bridge fittings in the language of the patent, to make connections between adjacent sticks. In the embodiment of Figure 7, such transverse manifolds include the end fittings labeled 46, which has a port in a plane transverse to the top plane which contains the ports communicating with the components. Eidsmore et al show in Figure 7 a four bolt mounting pattern for the three way and two way valves. Eidsmore et al, though, use bridge fittings for the gas sticks on the inlet side of the MFC. Ohmi et al show another gas stick where the inlet side of the MFC can be either a substrate/manifold or an integral block. It would have been obvious for one of ordinary skill in the art at the time the invention was made to have used an integral block instead of the substrate/manifold in Eidsmore et al, as for the inlet side of the MFC, in view of the equivalence taught by Ohmi et al.

Applicant's arguments have been fully considered but they are not persuasive. Mere argument without a factual basis cannot overcome a proper rejection. For example, column 7, lines 11-20 of Ohmi et al '933, of record, states that the manifold can be entirely of drilled blocks or entirely of two part blocks, the same inventive concept and structure of the instant claims.

Claim 37 is rejected under 35 U.S.C. 103(a) as being unpatentable over Eidsmore et al in view of Ohmi et al as applied to claim 1 above, and further in view of Symington.

Eidsmore et al, as modified, teach the claimed device except for testing for leakage. Symington teaches a gas stick apparatus including a base plate with means to test the apparatus for a gas leak. It would have been obvious for one of ordinary skill in the art at the time the invention was made to have used such a base plate with the device of Eidsmore et al, as modified, to provide for leak testing therein.

Claims 16-17, 35-36, and 38-41 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

All claims are drawn to the same invention claimed in the application prior to the entry of the submission under 37 CFR 1.114 and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the application prior to entry under 37 CFR 1.114. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action after the filing of a request for continued examination and the submission under 37 CFR 1.114. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
